Subject: Application for the position of Data Analyst

Dear Sir/Madam,

As a professional passionate about data analysis and the fight against fraud, I am applying for a Data Analyst position within your company. With more than five years of experience in the sector, I leverage my technical and analytical skills to transform complex data into strategic levers.

At Unigestion Holding S.A., I gained extensive experience in fraud detection and prevention, leveraging tools such as Oracle, SQL, and Python. My role involved analyzing large volumes of transactional data, identifying fraudulent trends, and supporting asset recovery efforts. This has allowed me to directly contribute to optimizing risk management strategies.

I am also currently completing a certification in web development and programming at Brigham Young University. This training allows me to strengthen my technical skills, particularly in full-stack development, and to stay up-to-date with developments in the digital sector.

Rigorous, proactive, and results-oriented, I now wish to put my expertise to work for a dynamic team in a stimulating environment focused on innovation. Joining your organization represents a great opportunity for professional development for me, as well as a concrete way to contribute to high-impact projects.

I thank you very much for your consideration of my application and remain available for an interview, during which I will be able to discuss my motivations in more detail.

Sincerely,

Djimy Francillon
